DATA SHEET

Reagent: HIV-1 clone DJ263.8

Catalog Number: 11704

Lot Number: 130397

Release Category: C

Provided: 5 µg of dried purified DNA stabilized in DNASTable *Plus*

Cloning Vector: CMV/R-MCS

Cloning Site: The HIV-1 env/rev cassette was cloned directly into the cloning site of CMV/R-MCS TOPO expression vector, in the correct orientation with the CMV promoter. The size of the insert is 2559 bp.

GenBank: [EU855130](#)

Description: A PCR fragment containing full-length env and rev genes was derived from the genomic DNA of infected PBMC. The original virus obtained from Drs. Francine McCutchan and Vicky Polonis of the US military HIV research program. The env/rev cassette was cloned into CMV/R-MCS expression vector by a directional cloning approach. A single transformed kanamycin resistant E.coli colong was selected and expanded. Recombinant plasmid carries resistance genes for kanamycin.

Special Characteristics: This clone expresses a functional env/rev cassette and can be used to generate psuedotyped infectious virions.

This reagent is currently being provided as dried purified DNA stabilized in DNASTable *Plus*. Please see the notice for additional information and the protocol for reconstitution of dried DNA reagents. [Dried DNA Notice](#)

Recommended Storage: Keep the reagent at room temperature in a dry storage cabinet or in a moisture barrier bag.

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
