DATA SHEET

Reagent: Monoclonal IgG YZ23

Catalog Number: 12047

Lot Number: 120170

Release Category: E

Provided: 400 μ L purified IgG at 200 μ g/mL, in 10mM sodium phosphate pH 7.4, 137 mM NaCl, 2.7 mM KCl.

Description: This antibody displays binary epitope reactivity directed to gp120 residues 301-311 and residues 421-433.¹

Host: Murine hybridoma: Mouse B cells fused with NS1 myeloma cell line.

Titer: Total protein is 200 μ g/mL by bicinchonic acid protein assay.

Special Characteristics: Immunogen: gp120MN derivatized with electrophilic phosphate diester groups.²

IgG neutralizes subtype C HIV strain 97ZA009 (primary isolate) with an IC₅₀ value of 8.2 μ g/mL using pooled human peripheral blood mononuclear cells (PBMC). Endotoxin concentration in stock IgG solution is 0.14 EU/mL. The endotoxin concentration will be 0.006 EU/mL at final concentration in the neutralization assay equivalent to the IC₅₀ (8.2 μ g/mL); Binds electrophilic 416-433 peptide detectably at 50 μ g/mL.¹

This antibody preparation does not neutralize pseudovirion infection of the TZm-bl cell line. It neutralizes infection of PHA-activated human PBMCs by genetically diverse primary strains [belonging to subtypes A, B and C].¹

Neutralization assays are conducted as in ref 3. Briefly, human PBMCs are pooled from 4 non-HIV-infected donors and activated with 5 μ g/mL phytohemagglutinin for 3 days. Virus stock is diluted in "RPMI medium" (RPMI 1640, antibiotics, 5% IL-2, 20% FBS). A primary isolate (for example, CCR5-dependent subtype C 97ZA009, 100 TCID₅₀ per well) is incubated for 1 hour with antibody diluted 1:2 in RPMI medium, and diluted further with 1:1 RPMI:PBS mixture. The mixture is then added into the wells containing 250,000 PBMCs in RPMI medium, and incubated for 3 days. Cells are washed and intracellular p24 is measured by ELISA on day 4. Titer assay variability of neutralization was determined in

is measured by ELISA on day 4. Inter-assay variability or neutralization was determined in 26 repeat assays using the subtype C virus ZA009. Neutralization was detectable in 26 out of 26 assays. The IC50 values varied from 0.5-59 µg/mL.

Recommended Storage: Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.

Contributor: Drs. Sudhir Paul and Stephanie Planque.

Isotype: IgG2a,kappa
