DATA SHEET

Reagent:	Anti-Human CD3/8 Bi-specific Monoclonal
Catalog Number:	12277
Lot Number:	150083
Release Category:	A
Provided:	100 µg (100 µL at 1 mg/mL) of purified antibody in PBS.
Description:	This antibody binds to both human CD3 and human CD8.
Host:	Mouse
Special Characteristics:	<p>Bi-specific monoclonal antibodies are recombinant antibodies composed of fragments from two different monoclonal antibodies and therefore can bind to two different antigens. The bi-specific nature of these antibodies have been classically exploited to link cancer antigen bearing cells to cytotoxic cells such as those expressing CD3, for the rapid removal of those cancerous cells.</p> <p>The bi-specific CD3/8 (CD3.8) monoclonal antibody was generated by fusing the anti-CD3 mAb producing hybridoma (12F6) with the anti-CD8 mAb producing hybridoma (OKT8). The resulting anti-CD3/8 antibody, when added to long term peripheral blood co-cultures results in the potent elimination of CD8+ T cells. The remaining cells are highly activated and serve as a reliable source of purified activated cells of interest.</p> <p>Protocol for cell expansion</p>
Recommended Storage:	Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.
Contributor:	DAIDS (Drs. Johnson Wong and Galit Alter)
