DATA SHEET

Reagent:	Anti-HIV-1 gp41 Monoclonal (10E8)
Catalog Number:	12294
Lot Number:	140114
Release Category:	C
Provided:	500 µg of affinity purified antibody at 1 mg/ml in PBS, 10% glycerol, pH 7.0.
Description:	10E8 is a broadly neutralizing HIV-1 antibody against all major subtypes. The epitope is within the MPER.
Special Characteristics:	The expression vectors for this antibody are also available. Heavy chain (cat# 12290) and light chain (cat# 12291) plasmids, can be used to express mAb in 293T cells. 10E8 tends to precipitate at 4°C or after -20°C storage, please warm it up at 37°C for 1 hour before use. Purity: ~95% Endotoxin Level: 0.1 EU/mg
Recommended Storage:	Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.
Contributor:	Jinghe Huang, Leo Laub, and Mark Connors
Isotype:	IgG1

Broad and potent neutralization of HIV-1 by a gp41-specific human antibody. Nature (2012) doi:10.1038/ nature11544

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.

NOTE:

Acknowledgment for publications should read "The following reagent was obtained through the NIH AIDS Reagent Program, Division of AIDS, NIAID, NIH: HIV-1 anti-gp41 mAb (10E8), from Dr. Mark Connors." Also include the reference cited above in any publications.

Scientists at for-profit institutions or who intend commercial use of this reagent must contact the NIH Office of Technology Transfer, Email: NIAIDAIDSReagent@niaid.nih.gov, before the reagent can be released. Please specify the name and a description of the intended use of the reagent.
