DATA SHEET

Reagent:	M311 Cells
Catalog Number:	1295
Lot Number:	99015
Release Category:	C
Provided:	7 x 10 ⁶ cells/vial.
Propagation Medium:	RPMI 1640, 90%; fetal bovine serum, 10%.
Freeze Medium:	RPMI 1640, 70%; fetal bovine serum, 20%; DMSO, 10%.
Growth Characteristics:	Split twice weekly 1:10. M311 cells are stable and do not need to be maintained in selection medium. If growth in selection medium is desired, propagation medium containing 700 µg/ml G418 should be used. Wash the thawed cells in propagation medium and centrifuge for 10 minutes at 1000 rpm before seeding the cells in a culture flask.
Sterility:	Negative for bacteria, fungi and mycoplasma.
Description:	M311 cells contains stably integrated, silent copies of the HIV-1 LTR promoter linked to the CAT gene.
Special Characteristics:	This cell line was generated by infection of Molt-4 cells with a helper-free recombinant retroviral vector containing the HIV-1 LTR-CAT gene construct. M311 was selected in geneticin (G418) under limiting dilution and is a sensitive indicator cell line for HIV-1 Tat. When infected by HIV-1, M311 produces high levels of chloramphenicol acetyl transferase (CAT) ^{1,2} .
Recommended Storage:	Liquid nitrogen.

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
