

# p239SpE3' /nef-open

p239SpE3' /nef open was created by site-specific mutagenesis of p239SpE3' (/nef-stop). The Tat position 9609 (whole number) was changed to a G. The SstI fragment (9486-11692) subcloned to IM13-mp18 was the mutagenic target. Oligonucleotide directed site-specific mutagenesis of a single stranded template was the procedure used. SstI fragment 11693-12301 is missing in the final clone.
