### DATA SHEET

<b>Reagent:</b>	☒ HIV-1 0.5E Virus
<b>Catalog Number:</b>	2808
<b>Lot Number:</b>	099089
<b>Release Category:</b>	A
<b>Provided:</b>	1 mL cell-free virus TCID <sub>50</sub> = 4.0 x 10 <sup>2</sup> /mL
<b>Host Strain:</b>	MT-2 cells
<b>Propagation:</b>	Propagated in MT-2 cells
<b>Sterility:</b>	Negative for mycoplasma, bacteria and fungi.
<b>Description:</b>	Protease mutant derived from AZT resistant strain (HIV-1 Donor E, cat# 2804).
<b>Special Characteristics:</b>	Single and double protease gene mutant strains were selected <i>in vitro</i> in the presence of the novel protease inhibitors DMP323 (a cyclic urea protease inhibitor) or P9941 (a C-2 symmetrical diol protease inhibitor). Four mutants derived from HIV-1 <sub>RF</sub> and one from the AZT-resistant strain Donor E are available. All of those viruses are stable in culture, and do not require the addition of antivirals to maintain phenotype. All are extremely cytopathic and require frequent feeding with uninfected cells.  <a href="#">Table of additional HIV-1 Protease mutants included in this set.</a>
<b>Recommended Storage:</b>	Liquid nitrogen.
<b>Contributor:</b>	Dr. Dean Winslow.
