### DATA SHEET

**Reagent:** FIV 34F10 Gag Expression Vector

**Catalog Number:** 3712

**Lot Number:** 9/18/97

**Release Category:** B

**Provided:** 1 vial ampicillin-resistant transformed BL21.DE3 (glycerol stock).

**Description:** The FIV-34F10 gag coding region was amplified by PCR from the start site (nt 630) to a region just 3' of the BamHI site at nt 2380. The 3' end was then digested with EcoRV at nt 2050 and HcII (in the pUC12NCO vector) and religated to interrupt the PR coding region.

**Special Characteristics:** This clone expresses the unprocessed FIV-34F10 Gag polyprotein, which includes MA, CA, NC, and P2, and terminates within PR of Pol. The protein can be used for structural and immunological studies. GenBank #M25729. Protein is expressed with or without IPTG induction. The infectious molecular clone FIV-34F10 is also available.

**Contributor:** Dr. John Elder.

**References:** Talbott RL, et al. Proc Natl Acad Sci USA 86:5743, 1989.
