DATA SHEET

Reagent:	GHOST (3) CCR5+ Cells (Hi-5)
Catalog Number:	3944
Lot Number:	110136
Release Category:	C
Provided:	1 ml of cells at 1.8 x 10^6 cells per mL. The viability is 90%.
Cell Type:	HOS (human osteosarcoma) cells
Propagation Medium:	High glucose DMEM, 90%; fetal bovine serum, 10%. Supplement with 500 µg/ml G418, 100 µg/ml hygromycin, pen/strep, and 1 µg/ml puromycin **[NOTE: GHOST (3) Parental Cell Line is puromycin sensitive, do not supplement with puromycin.]**
Freeze Medium:	FBS, 90%; DMSO, 10%.
Sterility:	Negative for mycoplasma, bacteria, and fungi.
Description:	The GHOST (3) CCR5+ Cells (Hi-5) express CD4 and relatively high levels of CCR5. The tat-dependent HIV-2 LTR-GFP construct produces GFP in response to infection.
Special Characteristics:	GHOST (3) parental cells are derived from HOS (human osteosarcoma) cells that were stably transduced with a MV7neo-T4 retroviral vector as well as stably cotransfected with a HIV-2 LTR-GFP construct and the CMV IE driving hygro-resistance construct. The GHOST (3) parental cell line was then transduced with retroviral vectors containing various HIV coreptors. For a full listing, please see Table 1 below. GHOST (3) Parent Cell Line: Progenitor cell line used to develop GHOST (3) indicator panel. They are adherent cells. GHOST Cell Transformants: Indicator cells for HIV-1, HIV-2, or SIV infection with uncloned, primary isolates, molecular clones, or pseudotyped virus. The puromycin-resistant cells are pools rather than clones for human coreceptor expression. Adherent cells.

NFNSX timecourse on GHOST (3) cells

Table 1: GHOST (3) HIV Indicator Cells

Protocol: Care and use of GHOST (3) HIV indicator cells

Recommended Storage:	Liquid nitrogen
Contributor:	Dr. Vineet N. KewalRamani and Dr. Dan R. Littman.
