DATA SHEET

Reagent: NIH-3T3 CD4+CCR5+ Cells

Catalog Number: 3947

Lot Number: 140082

Release Category: C

Provided: 1 vial (5.40 x 10⁶) frozen cells. Viability is 98%.

Propagation Medium: DMEM, 90%; fetal bovine serum, 10%. Supplement with 3 µg/ml puromycin and pen/strep (**Note:** G418-sensitive).

Freeze Medium: Fetal bovine serum, 90%; DMSO, 10%.

Sterility: Negative for bacteria, fungi, and mycoplasma.

Description: NIH-3T3 cells expressing human CD4 and human CCR5.

Special Characteristics: NIH-3T3 cells were stably transduced with the MLV MX-CD4 retroviral vector and sorted for high CD4 expression. Cells were subsequently transduced with pBABE-puro-CCR5 and selected for puromycin resistance. Human CD4 and CCR5 expression are each directed by the MX vector and BABE vector MLV LTR elements, respectively.

Cell line for HIV/SIV infections. As murine cells do not replicate HIV/SIV efficiently, these cells are typically used for infections with HIV/SIV Env pseudotyped vectors (ex: HIV-luc), or in syncytium assays, but not with replication-competent virus infections.

Alternate names: 3T3.T4.CCR5

Contributor: Dr. Dan Littman.
