### DATA SHEET

**Reagent:** NIH-3T3 CD4+Bonzo+ Cells

**Catalog Number:** 3950

**Lot Number:** 98012

**Release Category:** C

**Provided:** 1 vial (2 x 10<sup>6</sup>) frozen cells.

**Propagation Medium:** DMEM, 90%; fetal bovine serum, 10%. Supplement with 3 µg/ml puromycin and pen/strep. G418 sensitive.

**Freeze Medium:** Fetal bovine serum, 90%; DMSO, 10%.

**Sterility:** Negative for bacteria, fungi, and mycoplasma.

**Description:** NIH-3T3 cells expressing human CD4 and human Bonzo.

**Special Characteristics:** NIH-3T3 cells were stably transduced with the MLV MX-CD4 retroviral vector and sorted for high CD4 expression. Cells were subsequently transduced with pBABE-puro-Bonzo and selected for puromycin resistance. Human CD4 and Bonzo/STRL33 expression are each directed by the MX vector and BABE vector MLV LTR elements, respectively.

Cell line for HIV/SIV infections. As murine cells do not replicate HIV/SIV efficiently, these cells are typically used for infections with HIV/SIV Env pseudotyped vectors (ex: HIV-luc), or in syncytium assays, but not with replication-competent virus infections.

Alternate names: 3T3.T4.Bonzo

**Contributor:** Dr. Dan Littman.

**References:** Deng H-K, Unutmaz D, KewalRamani VN, Littman DR. Expression and cloning of new receptors used by simian and human immunodeficiency viruses. *Nature* **388**:296-300, 1997.
