DATA SHEET

Reagent:	U87 CD4+CCR5+ Cells
Catalog Number:	4035
Lot Number:	110097
Release Category:	C
Provided:	4 x 10 ⁶ cells/ml. Viability is 82%.
Cell Type:	Human astrocytoma (glioblastoma) cells
Propagation Medium:	DMEM, 85%; fetal bovine serum, 15%. Supplement with 1 μ g/ml puromycin, 300 μ g/ml G418, glutamine, and pen/strep.
Freeze Medium:	Fetal bovine serum, 90%; DMSO, 10%.
Growth Characteristics:	Cells divide slowly; however, they should not be allowed to become over-confluent. In general, pass cells at 80% confluency and split no more than 1:10. Sensitive to acidic medium.
Sterility:	Negative for bacteria, fungi, and mycoplasma.
Description:	U87MG cells that express CD4 and CCR5.
Special Characteristics:	U87MG cells (cat# 2188) were stably transduced with the MV7neo-T4 retroviral vector and selected for G418 resistance to produce U87 CD4+ Cells (cat# 4031). Cells were subsequently transduced with pBABE-puro-CCR5 and selected for puromycin resistance. Human CD4 and CCR5 expression are each directed by the MV7 vector and BABE vector MLV LTR elements, respectively.
	U87 cells endogenously express the virus coreceptors GPR1 and Bonzo/STRL33, which can be used by certain SIV and HIV-2 isolates for cell entry. These cells may be contaminated with amphotropic MLV.
