### DATA SHEET

<b>Reagent:</b>	Anti-human CCR-5 MAb (45502.111)
<b>Catalog Number:</b>	4088
<b>Lot Number:</b>	130300
<b>Release Category:</b>	A
<b>Provided:</b>	100 µg affinity purified antibody resuspended in PBS at 1 mg/mL.
<b>Host Site:</b>	Balb/c mice
<b>Special Characteristics:</b>	This antibody was produced from a hybridoma resulting from the fusion of a mouse myeloma with B cells obtained from a mouse inoculated with hCCR5 transfected NSO mouse myeloma cells. The IgG fraction of ascites fluid was purified by Protein G affinity chromatography. This antibody was selected for its ability to react specifically with hCCR5 transfectants but not the parental cell line as detected by flow cytometry. It has also been shown to react with a CCR5/CCR2 chimera (5222) containing the amino-terminal domain of CCR5. However, this antibody does not react with CCR5 present on unfixed stimulated human PBMCs by flow cytometry. Recommendation for Flow Cytometry: Dilute antibody to 25µg/mL and add 10µL of 1- 2.5 x 10 <sup>6</sup> cells in a total volume not exceeding 200µL.
<b>Recommended Storage:</b>	Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.
<b>Contributor:</b>	R&D Systems
<b>Isotype:</b>	Mouse IgG <sub>2b</sub>
