DATA SHEET

Reagent: Anti-HIV-1 gp120 Monoclonal (17b)

Catalog Number: 4091

Lot Number: 130053

Release Category: A

Provided: 200 µg affinity purified antibody at 4.0 mg/ml.

Description: Purified from culture supernatant by Protein A/G affinity chromatography.

Host Site: Human.

Special Characteristics: Obtained by EBV transformation of B cells from PBMCs of an asymptomatic HIV-1 infected individual. Antibody binds to moderately well conserved conformation-dependent epitope of HIV-1 gp120. Binding of antibody is significantly enhanced when gp120 is bound to CD4. The antibody has neutralizing activity against several laboratory strains of HIV-1 and some primary isolates.

Recommended Storage: Avoid repeated freeze-thaw cycles. Thus, it is recommended to produce working stock aliquots and store at -80°C. Aliquots under current use can be stored at 4°C

Contributor: Dr. James E. Robinson.

Isotype: IgG₁.
