DATA SHEET

Reagent: SHIV 89.6P Env Peptide Set

Catalog Number: 4827

Lot Number: 3

Provided: 86 vials, 1.0 mg each.

Solubility: See attached table. Peptides that are difficult to solubilize can almost always be dissolved in DMSO. Once a peptide is in solution, the DMSO can be slowly diluted with aqueous medium. Care must be taken to ensure that the peptide does not begin to precipitate out of solution.

Please note: Cys and Met containing peptide sequences are highly unstable when stored in DMSO for prolonged periods of time; peptide decay is often observed within days to weeks. If DMSO is required, we recommend freshly-prepared working solutions from freeze dried aliquots of these peptides, and prepared pools.

Special Characteristics: Series of peptides comprising the SHIV89.6 Env region. Most of the peptides are 20 amino acids in length, with 10-amino acid overlaps between sequential peptides. Most peptides are >80% pure.

Genbank: U89134 Peptides that are difficult to solubilize can almost always be dissolved in DMSO. Once a peptide is in solution, the DMSO can be slowly diluted with aqueous medium. Care must be taken to ensure that the peptide does not begin to precipitate out of solution.
