DATA SHEET

Reagent: HIV-1 CH200b Infectious Molecular Clone

Catalog Number: 13537

Lot Number: 190368

Release Category: C

Provided: 5 µg of dried purified DNA stabilized in DNastable *PLUS*

Cloning Vector: pUC57
Ampicillin resistant

Cloning Site: EcoRI/HindIII cloning site
The size of the insert is approximately 10,000 bp.

GenBank: [KC156118](#)

Host Strain: Plasmids can be propagated in STBL2 cells and grown at 37°C. Larger plasmids may benefit from growth at 30°C. This construct may also be grown in other competent cells.

Description: A full length transmitted/founder (T/F) replication competent, infectious HIV-1 subtype C CH200b molecular clone. The virus produced by this molecular clone utilizes the co-receptor CCR5.

Special Characteristics: This construct is approximately 14,000 bp including the insert.
Viral RNA was extracted from plasma samples from a Fiebig stage I/II male HIV-1 infected individual from Malawi. Consensus sequences of acute infection viruses were chemically synthesized as three fragments covering the entire proviral genome sequences, cloned, and combined within a single plasmid vector (pBR322 or pUC57) as a complete proviral genome.
This reagent is currently being provided as dried purified DNA stabilized in DNastable

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.

PLUS. Please see the notice for additional information and the protocol for reconstitution of dried DNA reagents. [Dried DNA Notice](#)

Recommended Storage: Keep the reagent at room temperature in a dry storage cabinet or in a moisture barrier bag.
