DATA SHEET

Reagent: HIV-1 CH167 Infectious Molecular Clone

Catalog Number: 13544

Lot Number: 190369

Release Category: C

Provided: 5 µg of dried purified DNA stabilized in DNASTable *PLUS*

Cloning Vector: pUC57
Ampicillin resistant

Cloning Site: MluI/NotI cloning site
The size of the insert is approximately 10,000 bp.

GenBank: [KC156213](#)

Host Strain: Plasmids can be propagated in STBL2 cells and grown at 37°C. Larger plasmids may benefit from growth at 30°C. This construct may also be grown in other competent cells.

Description: A full length replication competent, infectious HIV-1 subtype C CH167 molecular clone. The virus produced by this molecular clone utilizes the co-receptor CCR5.

Special Characteristics: This construct is approximately 14,000 bp including the insert.
Viral RNA was extracted from plasma samples from an HIV-1 infected female from Malawi. Consensus sequences were generated with clonally expanded viral sequences in the chronic infection samples. The sequences were cloned and combined within a single plasmid vector (pBR322 or pUC57) as a complete proviral genome.
This reagent is currently being provided as dried purified DNA stabilized in DNASTable *PLUS*. Please see the notice for additional information and the protocol for reconstitution of dried DNA reagents. [Dried DNA Notice](#)

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.

or dried DNA reagents. [Dried DNA NOTICE](#)

Recommended Storage:

Keep the reagent at room temperature in a dry storage cabinet or in a moisture barrier bag.
