Genomic RNA from Influenza A virus, A/turkey/Massachusetts/3740/1965 (H6N2)

Catalog No. NR-43013

For research use only. Not for use in humans.

Manufacturer:
BEI Resources

Product Description:
Genomic RNA was isolated from a preparation of pooled allantoic fluid from specific pathogen free (SPF) embryonated chicken eggs infected with influenza A virus, A/turkey/Massachusetts/3740/1965 (H6N2).

Influenza A virus, A/turkey/Massachusetts/3740/1965 (H6N2) was isolated from a turkey in Massachusetts on June 11, 1965. Sequence information is available for influenza A virus, A/turkey/Massachusetts/3740/1965 (H6N2) at the Influenza Research Database.

NR-43013 has been qualified for PCR applications by amplification of an approximately 1030 base pairs sequence. Recommended dilutions for successful RT-PCR amplification are indicated on the Certificate of Analysis for each lot.

Material Provided:
Each vial contains approximately 100 µL of viral genomic RNA in TE buffer (10 mM Tris-HCl, 1 mM EDTA, pH 7.0). The viral genomic RNA is in a background of cellular nucleic acid and carrier RNA. The vial should be centrifuged prior to opening.

Packaging/Storage:
NR-43013 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen on dry ice and should be stored at -60°C or colder immediately upon arrival. Freeze-thaw cycles should be minimized.

Citation:
Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH: Genomic RNA from Influenza A virus, A/turkey/Massachusetts/3740/1965 (H6N2), NR-43013.”

Biosafety Level: 1
