SARS-Related Coronavirus 2, Isolate hCoV-19/Denmark/DCGC-3024/2020

Catalog No. NR-53953

For research use only. Not for use in humans.

Contributor:
Anders Fomsgaard, Professor, Statens Serum Institut, Copenhagen, Denmark and Public Health England, United Kingdom

Manufacturer:
BEI Resources

Product Description:
Virus Classification: *Coronaviridae*, *Betacoronavirus*
Species: Severe acute respiratory syndrome-related coronavirus 2
Strain/Isolate: hCoV-19/Denmark/DCGC-3024/2020 (Note: This virus was originally deposited to BEI Resources as SARS-CoV-2, isolate hCoV-19/hu/DK/CL-5/1. Please note that the depositor's original strain designation was used on the product label.)
Original Source: Severe acute respiratory syndrome-related coronavirus 2 (SARS-CoV-2), isolate hCoV-19/Denmark/DCGC-3024/2020 was isolated from a human who was exposed to a COVID-19 infected mink in Northern Jutland, Denmark on October 5, 2020.[1]

Note: Genome sequence information is provided on the Certificate of Analysis and includes an analysis of all sequence variations observed for each lot.

Comments: Under the nomenclature system introduced by GISAID (Global Initiative on Sharing All Influenza Data), SARS-CoV-2, isolate hCoV-19/Denmark/DCGC-3024/2020 is assigned lineage B.1.1.298 and GISAID clade GR using Phylogenetic Assignment of Named Global Outbreak LINeages (PANGOLIN) tool.[2,3,4] The complete genome of SARS-CoV-2, isolate hCoV-19/Denmark/DCGC-3024/2020 has been sequenced (GISAID: EPI_ISL_616802).[2] The following mutations are present in the clinical isolate: Spike D614G, Spike H69del, Spike I692V, Spike M1229I, Spike V70del, Spike Y453F, N (Nucleocapsid protein) G204R, N R203K, N S194L, NSP1 (Non-structural protein 1) M85del, NSP3 (Non-structural protein 3) H182Y, NSP3 N1263del, NSP12 (Non-structural protein 12) P323L, NSP12 T739I, NSP15 (Non-structural protein 15) T112I.[2] SARS-CoV-2, isolate hCoV-19/Denmark/DCGC-3024/2020 is a mink-associated SARS-CoV-2 Cluster 5 (also referred to as ΔFVI-spike) virus defined by the following Spike mutations: H69del, V70del, Y453F, I692V and M1229I.[1,5]

In December 2019, an outbreak of a respiratory illness (COVID-19) began in Wuhan, Hubei Province, China. The outbreak is associated with a seafood market and although environmental samples from the market are positive for the novel coronavirus, an association with a particular animal has not been determined.[6] SARS-CoV-2 has been isolated from patients from several countries and the sequences of some of these isolates have been deposited with GISAID.

Material Provided:
Each vial contains approximately 0.5 mL of cell lysate and supernatant from *Cercopithecus aethiops* kidney epithelial cells with human signaling lymphocytic activation molecule (hSLAM) infected with SARS-CoV-2, isolate hCoV-19/Denmark/DCGC-3024/2020.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:
NR-53953 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:
Host: *Cercopithecus aethiops* kidney epithelial cells with human signaling lymphocytic activation molecule (hSLAM)
Growth Medium: Dulbecco's Minimum Essential Medium containing 4 mM L-glutamine, 4500 mg per L glucose, 1 mM sodium pyruvate and 1500 mg per L of sodium bicarbonate supplemented with 2% fetal bovine serum and 1% penicillin/streptomycin solution, or equivalent
Infection: Cells should be 70% to 90% confluent
Incubation: 7 to 10 days at 37°C and 5% CO_2
Cytopathic Effect: Cell rounding and sloughing

Citation:
Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH: SARS-Related Coronavirus 2, Isolate hCoV-19/Denmark/DCGC-3024/2020, NR-53953, contributed by Anders Fomsgaard and Public Health England."

Biosafety Level: 3
Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 6th ed. Washington, DC: U.S. Government Printing Office, 2020; see www.cdc.gov/biosafety/publications/bmbl5/index.htm.

Disclaimers:
You are authorized to use this product for research use only. This product is not intended for human use.

Use of this product is subject to the terms and conditions of the Emergency Use Simple Letter Agreement (EUSLA) and the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

This product is sent with the condition that you are responsible for its safe storage, handling, use and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to BEI Resources are not liable for damages arising from the misidentification or misrepresentation of products.

Use Restrictions:

SARS-CoV-2 materials provided by BEI Resources under the EUSLA are made available for any legitimate purpose, including commercial purposes as long as they are to rapidly prevent, detect, prepare for, and respond to, the spread or transmission of the 2019 SARS-CoV-2. Any further transfer of the original material or any unmodified progeny must be done under the terms of the EUSLA, documented as described above and you must notify BEI Resources of each subsequent transfer. Any new materials made by you that are not the original material or unmodified progeny are excluded from this requirement and you are free to share and commercialize those as your materials.
