

# Certificate of Analysis for NR-52225

## Acinetobacter baumannii, Strain MRSN 31937

## Catalog No. NR-52225

This reagent is the tangible property of the U.S. Government.

## **Product Description:**

Acinetobacter baumannii (A. baumannii), strain MRSN 31937 was isolated in 2004 from a human wound in Europe as part of a global surveillance program. A. baumannii, strain MRSN 31937 was deposited as sensitive to amikacin, ampicillin/sulbactam, cefepime, ceftazidime, ceftriaxone, ciprofloxacin, colistin, gentamicin, imipenem, levofloxacin, meropenem, tetracycline, tobramycin and trimethoprim/sulfamethoxazole. NR-52225 lot 70042846 was produced by inoculation of the deposited material into Tryptic Soy broth and grown for 1 day at 37°C in an aerobic atmosphere. Broth inoculum was added to Tryptic Soy agar kolles, which were grown for 1 day at 37°C in an aerobic atmosphere to produce this lot. Quality control testing was completed under propagation conditions unless otherwise noted.

Lot: 70042846 Manufacturing Date: 17MAR2021

BEI Resources is committed to ensuring digital accessibility for people with disabilities. This Certificate of Analysis contains complex tables and may not be fully accessible. Please let us know if you encounter accessibility barriers and a fully accessible document will be provided: E-mail: <a href="mailto:contact@BEIResources.org">contact@BEIResources.org</a>. We try to respond to feedback within 24 hours.

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis		
Cellular morphology	Gram-negative rods	Gram-negative rods
Colony morphology	Report results	Circular, convex, entire, smooth and
		cream (Figure 1)
Growth at 44°C ± 2°C <sup>1</sup>	Growth	Growth
1 day in an aerobic atmosphere on Tryptic		
Soy agar		
Motility  RBI TM Matility To at Madisum out/TTO be diseased.	Report results	Non-motile
BBL™ Motility Test Medium w/TTC Indicator for 1 day at 37°C in an aerobic atmosphere
