

Enterovirus Species D Type 68, USA/2018-23206 (produced in Serum-Free A549 Cells)

Catalog No. NR-52355

This reagent is the property of the U.S. Government.

For research use only. Not for use in humans.

Contributor:

William Allan Nix, Polio and Picornavirus Laboratory Branch, Division of Viral Diseases, Centers for Disease Control and Prevention, Atlanta, Georgia, USA

Manufacturer:

BEI Resources

Product Description:

Virus Classification: *Picornaviridae, Enterovirus*

Species: Enterovirus D

Type: D68

Strain/Isolate: USA/2018-23206

Original Source: Enterovirus species D type 68 (EV-D68), USA/2018-23206 was isolated in 2018 from a nasopharyngeal swab of a human subject in Maryland, USA.¹ The human subject was suffering from acute flaccid myelitis.¹

Comments: NR-52355 is a preparation of cell lysate and supernatant from serum-free-adapted human lung carcinoma cells (A549; BEI Resources NR-52268) infected with EV-D68, USA/2018-23206 under serum-free conditions. The complete genome of EV-D68, USA/2018-23206 has been sequenced [isolate (GenBank: [MN245999](#)) and the cell culture isolate of the clinical sample (GenBank: [MN389731](#))].

Enteroviruses are small non-enveloped viruses whose genome consists of a single strand of positive-sense RNA.² EV-D68 was first identified in California in 1962 from cases of bronchiolitis and pneumonia and was rarely reported in the United States. Clusters of severe respiratory disease were reported to the Centers for Disease Control and Prevention beginning in August 2014.² EV-D68 was identified from a high percentage of initial cases, and severe EV-D68 infections became widespread across the United States in August and September.² These outbreaks were associated temporally with an increase in polio-like neurological disorder known as acute flaccid myelitis (AFM), with symptoms like dysneuria and muscle weakness, occurring predominantly in children.^{3,4} Information regarding causation between EV-D68 and AFM is still limited; however, rapidly accumulating clinical, immunological and epidemiological evidence points to EV-D68 as a major causative agent of AFM.^{3,4}

Material Provided:

Each vial contains approximately 0.5 mL of cell lysate and supernatant from serum-free-adapted A549 cells infected with EV-D68, USA/2018-23206.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

NR-52355 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Host: Human lung carcinoma cells adapted to serum-free media (A549; BEI Resources NR-52268)

Growth Medium: PC-1™ Serum-Free Media (Lonza™ 344018) supplemented with 2% PC-1™ Supplement A (Lonza™ 344022) and 4 mM L-glutamine (ATCC® 30-2214™)

Infection: Cells should be 80% to 95% confluent.

Incubation: 2 to 6 days at 33°C and 5% CO₂

Cytopathic Effect: Cell rounding and sloughing

Citation:

Acknowledgment for publications should read “The following reagent was contributed by Division of Viral Diseases, Centers for Disease Control and Prevention for distribution through BEI Resources, NIAID, NIH: Enterovirus Species D Type 68, USA/2018-23206 (produced in Serum-Free A549 Cells), NR-52355.”

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 6th ed. Washington, DC: U.S. Government Printing Office, 2020; see www.cdc.gov/biosafety/publications/bmb15/index.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.
