

***Aerococcus mictus*, Strain UMB3440**

Catalog No. NR-58629

For research use only. Not for use in humans.

Contributor:

Alan J. Wolfe, Professor, Department of Microbiology and Immunology, Loyola University Chicago, Maywood, Illinois, USA

Manufacturer:

BEI Resources

Product Description:

Bacteria Classification: *Aerococcaceae*, *Aerococcus*

Species: *Aerococcus mictus*¹

Note: The species on the label is incorrect. NR-58629 was deposited to BEI Resources as the proposed species *Aerococcus mingo* and was updated by the depositor to *Aerococcus mictus* due to nomenclature rules.

Strain: UMB3440

Original Source: *Aerococcus mictus* (*A. mictus*), strain UMB3440 was isolated in 2016 from a urine sample via transurethral catheter of a patient with urge urinary incontinence.^{1,2,3}

Comments: *Aerococcus mictus*, strain UMB3440 was deposited to BEI Resources as sensitive to vancomycin and the type strain for *Aerococcus mictus*.¹ The complete genome for *A. mictus*, strain UMB3440 has been sequenced (GenBank: [CP132985](#)).

Aerococcus species are Gram-positive, microaerophilic, nonmotile bacteria that are associated with urinary tract infections, bacteremia and endocarditis. This genus is often misidentified as streptococci or staphylococci, leading to decreased diagnosis of *Aerococcus* infections. With the introduction of improved methods for species determination, aerococci are becoming increasingly recognized as human pathogens, particularly in the elderly.^{4,5,6}

Material Provided:

Each vial contains approximately 0.5 mL of bacterial culture in NYC III broth supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

NR-58629 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Media:

NYC III broth or equivalent

Tryptic Soy agar with 5% defibrinated sheep blood, Columbia CNA agar with 5% defibrinated sheep blood or equivalent

Incubation:

Temperature: 37°C

Atmosphere: Aerobic with 5% CO₂

Propagation:

1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 to 2 days.

Citation:

Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH: *Aerococcus mictus*, Strain UMB3440, NR-58629.”

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. [Biosafety in Microbiological and Biomedical Laboratories \(BMBL\)](#). 6th ed. Washington, DC: U.S. Government Printing Office, 2020.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. Neither ATCC® nor the U.S. Government warrants that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, use and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to BEI Resources are not liable for damages arising from the misidentification or misrepresentation of products.

Use Restrictions:

This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or

its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale. This material may be subject to third party patent rights.
