Catalog No. NR-12278

This reagent is the property of the U.S. Government.

Product Description:

Influenza A virus, A/Sydney/5/1997 (H3N2) was isolated from human in Sydney, Australia in 1997. NR-12278 lot 70060721 was produced in the allantoic cavity of specific pathogen free (SPF) embryonated chicken eggs (10- to 11-day-old; Charles River, Norwich, Connecticut, USA) infected with the deposited material for 2 days at 35°C in a humidified chamber.

Lot: 70060721

Manufacturing Date: 01JUN2023

¹The Chicken Embryo Infectious Dose 50% (CEID₅₀) is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the inoculated embryonated chicken eggs, just as a Lethal Dose 50% (LD₅₀) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the CEID₅₀ provides a measure of the infectious titer (or infectivity) of a virus preparation.
