¹*S. epidermidis*, strain BCM0060 was deposited by Sarah K. Highlander, Associate Professor, Department of Molecular Virology and Microbiology, Baylor College of Medicine, Houston, Texas. HM-140 was produced by inoculation of the deposited material into Brain Heart Infusion Broth (BD 237500) and grown 24 hours at 37°C. Broth inoculum was added to Kolles which were grown 24 hours at 37°C to produce this lot.

²24 hours at 37°C and aerobic atmosphere on Tryptic Soy Agar with 5% sheep blood

³A small percentage of *S. epidermidis* strains are known to have hemolytic activity (Michelim, L., et al. "Pathogenicity Factors and Antimicrobial Resistance of *Staphylococcus epidermidis* Associated with Nosocomial Infections Occurring in Intensive Care Units." *Braz. J. Microbiol.* 36 (2005): 17-23.
