

Influenza A Virus H6 Primers

Catalog No. NR-15420

This reagent is the tangible property of the U.S. Government.

Product Description: NR-15420 contains forward and reverse primers that specifically amplify a region of the HA gene of influenza A virus subtype 6 (H6), resulting in an amplicon of approximately 302 bp.

Lot: 58732872

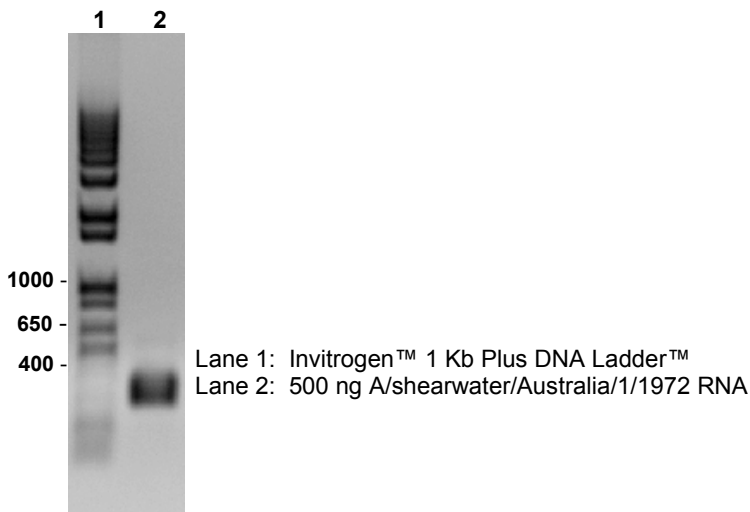

Manufacturing Date: 09JUL2009

TEST	SPECIFICATIONS	RESULTS
PCR Amplification and Sequencing^{1,2} Amplicon size NCBI blast of sequence	Expected size Expected sequence	~ 302 bp (Figure 1) H6
Specificity	Specific for H6	Specific for H6
Concentration of Each Primer	Report results	50 µM

¹Viral genomic RNA from influenza A virus, A/shearwater/Australia/1/1972 (H6N5) was extracted using a Qiagen QIAamp[®] Viral RNA Mini kit. The viral genomic RNA is in a background of cellular nucleic acid and carrier RNA.

²The primers are described in Lee, M. S., et al. "Identification and Subtyping of Avian Influenza Viruses by Reverse Transcription-PCR." *J. Virol. Methods* 97 (2001): 13-22. PubMed: 11483213.
