¹QC testing was performed by the Biomedical Research Institute, Rockville, MD (NIH-NIAID Contract HHSN272201000005I)

²mRNA was amplified from total RNA by SMART™ mRNA Amplification Kit (Clontech) according to the manufacturer's instructions.

³Primers were designed to amplify positions 41-359 of *S. mansoni* (PDI) gene (GenBank XM002576922.1).

⁴This test confirms that no contamination occurred during egg collection from mouse genetic materials.
