

Bacteriophage Phi05_2289M/Sa1303, Infectious for *Staphylococcus aureus*

Catalog No. HM-679

Product Description: Bacteriophage phi05_2289M/Sa1303 was isolated from Sa05_2289 bacterium derived from blood taken from a patient with septicemia. Bacteriophage phi05_2289M/Sa1303 is a reference genome for The Human Microbiome Project (HMP).

Lot^{1,2}: 60185070

Manufacturing Date: 18AUG2011

TEST	SPECIFICATIONS	RESULTS
Plaque Morphology³	Report results	Circular and clear
Titer (Post-vial) Plaque-forming units (pfu) with <i>Staphylococcus aureus</i>	>10 ⁶ pfu per mL	3.5 x 10 ⁸ pfu per mL
Sterility	0.22 µm filtered	0.22 µm filtered
Bacterial Inactivation 10% of total yield plated on Tryptic Soy Agar with 5% defibrinated sheep blood ⁴	No viable bacteria detected	No viable bacteria detected

¹Quality control of HMP material is only performed to demonstrate that the product distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited material.

²The deposited material was added to a Luria-Burtani (LB) soft agar overlay (0.5%) supplemented with 10 mM MgSO₄ containing the phage host, *Staphylococcus aureus*, strain Sa1303. The soft agar overlay was added to an LB Agar Kolle supplemented with 10 mM MgSO₄ and incubated 24 hours at 30°C in an aerobic atmosphere. After two additional passages under the above conditions, the bacteriophage were harvested to produce this lot.

³Lysis was observed on the soft agar overlay after 24 hours at 30°C in an aerobic atmosphere.

⁴8 days at 37°C in an aerobic atmosphere

Date: 06 FEB 2013
