

Certificate of Analysis for NR-12176

Salmonella enterica subsp. enterica, Strain 14028s \(\Delta mviA \) (Serovar Typhimurium)

Catalog No. NR-12176

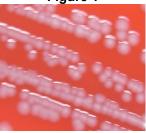

Product Description: Salmonella enterica (S. enterica) subsp. enterica, strain 14028s $\Delta mviA$ (serovar Typhimurium) was derived from strain 14028s. The $\Delta mviA$ mutant was produced by creating a PCR product with mviA homologous sequences at the 5' and 3' ends of a linear fragment containing a kanamycin resistance cassette. S. enterica subsp. enterica, strain 14028s was transformed, and insertion of the kan cassette in place of mviA was confirmed by PCR. The final non-polar deletions were constructed by elimination of the kan cassette.

Lot¹: 61693044 Manufacturing Date: 18APR2013

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology	Report results	Gram-negative rod
Colony morphology ²	Report results	Circular, low convex, entire, smooth and gray (Figure 1)
Analytical profile index (API [®] 20 E) ³	Consistent with Salmonella spp.	Consistent with Salmonella spp.
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 950 base pairs) Riboprinter® Microbial Characterization System	Consistent with S. enterica Consistent with S. enterica	Consistent with S. enterica subsp. enterica Consistent with S. enterica subsp.
Serogroup Analysis	Report results	enterica serovar Typhimurium Serogroup B ⁴
Viability (post-freeze) ²	Growth	Growth

NR-12176 was produced by inoculation of the deposited material into Tryptic Soy broth and grown 24 hours in an aerobic atmosphere at 37°C. Broth inoculum was added to kolles which was grown 24 hours at 37°C and aerobic atmosphere to produce this lot.
