# Synfluenza (Synthetic Influenza) Clone Set, Recombinant in Escherichia coli, Plate 8 (Hemagglutinin) 

## Catalog No. NR-45097

This reagent is the tangible property of the U.S. Government.
Product Description: Each synthetic hemagglutinin (HA) gene from NR-45097 was manufactured from seven individually-designed, double-stranded DNA construct cassettes produced by assembly of eight chemically-synthesized oligonucleotides using the Gibson Assembly ${ }^{\top M}$ process. The seven cassettes were combined into the $\mathrm{pSMART}{ }^{\text {® }}$-LCKan vector (Lucigen ${ }^{\circledR}$ ) to establish gene segment clones in One Shot ${ }^{\oplus}$ TOP10 competent (Invitrogen ${ }^{\text {TM }}$ ) Escherichia coli (E. coll) cells.

Lot $^{1}$ : 62123439
Manufacturing Date: 26SEP2013

| TEST | SPECIFICATIONS | RESULTS |
| :--- | :--- | :--- |
| Presence of HA Insert Sequence $^{2}$ | Confirmed | Confirmed |
| Viability | Report results | Growth confirmed |

${ }^{1}$ All quality control results were provided by J. Craig Venter Institute.
${ }^{2}$ All clones are reported to contain full length inserts
