

Bacteriophage Phi_ET309sp/Pa1651, Infectious for *Pseudomonas aeruginosa*

Catalog No. HM-656

Product Description: Bacteriophage phi_ET309sp/Pa1651 was isolated from leg, foot or decubitus ulcers of a human patient. Bacteriophage phi_ET309sp/Pa1651 (HMP ID 9766) is a reference genome for The Human Microbiome Project (HMP).

Lot^{1,2}: 59978208

Manufacturing Date: 30JUN2011

TEST	SPECIFICATIONS	RESULTS
Plaque Morphology³	Report results	Pinpoint
Titer³ Plaque-forming units (pfu) with <i>Pseudomonas aeruginosa</i>	>10 ⁶ pfu per mL	3 x 10 ⁸ pfu per mL
Sterility	0.22 µm filtered	0.22 µm filtered

¹Quality control of HMP material is only performed to demonstrate that the product distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited material.

²The deposited material was added to a Luria-Burtani (LB) soft agar overlay (0.5%) supplemented with 10 mM MgSO₄ containing the phage host, *Pseudomonas aeruginosa*, strain Pa1651. The soft agar overlay was added to an LB agar kolle supplemented with 10 mM MgSO₄ and incubated 24 hours at 30°C in an aerobic atmosphere. After two additional passages under the above conditions, the bacteriophage were harvested to produce this lot.

³Lysis was observed on the soft agar overlay after 24 hours at 30°C in an aerobic atmosphere.
