

***Trypanosoma brucei* subsp. *brucei*, Strain TREU 667**

Catalog No. NR-46440

Product Description: *Trypanosoma brucei* (*T. brucei*) subsp. *brucei*, strain TREU 667 (Trypanosomiasis Research Edinburgh University) was originally isolated in Kenya. The TREU 667 strain is a pleomorphic strain of low virulence to mice.

Lot¹: 62693033

Manufacturing Date: 05JUN2014

TEST	SPECIFICATIONS	RESULTS
Genotyping Sequencing of internal transcribed spacer (ITS) 1, 5.8S ribosomal RNA gene, ITS 2 (~ 450 base pairs)	Consistent with <i>T. brucei</i>	Consistent with <i>T. brucei</i> ²
Functional Activity by PCR Amplification ITS 1, 5.8S ribosomal RNA gene, ITS 2 ³	~ 1300 base pair amplicon	~ 1300 base pair amplicon
Level of Parasitemia (pre-freeze)⁴	≥ 1 x 10 ⁶ parasites/mL	1.5 x 10 ⁶ parasites/mL
Viability (post-freeze)⁵	Growth in inoculated mouse	Growth in inoculated mouse

¹NR-46440 was produced by inoculation of the deposited material into a BALB/c mouse. Infection was allowed to progress for 6 days until the first peak of parasitemia was reached. Infected blood was collected by orbital bleeding and used to inoculate 10 BALB/c mice. Infection was allowed to progress for 7 days until the first peak of parasitemia was reached and infected blood was collected by orbital bleeding.

²Also consistent with *T. evansi* and/or *T. equiperdum*, which are putative subspecies of *T. brucei* (Lun, Z.-R., et al. "Trypanosoma brucei: Two Steps to Spread Out from Africa." *Trends Parasitol.* 26 (2010): 424-427. PubMed: 20561822.)

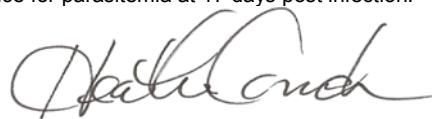

³PCR was performed as described in Agbo, E. C., et al. "Measure of Molecular Diversity within the *Trypanosoma brucei* Subspecies *Trypanosoma brucei brucei* and *Trypanosoma brucei gambiense* as Revealed by Genotypic Characterization." *Exp. Parasitol.* 99 (2001): 123-131. PubMed: 11846522.

⁴Parasitemia was determined after 7 days of infection by microscopic counts using a haemocytometer and 0.85% ammonium chloride as diluent.

⁵Viability of trypanosomes was confirmed by examination of BALB/c mice for parasitemia at 17 days post infection.

Date: 09 NOV 2015
