Certificate of Analysis for NR-49292

Clostridium difficile, Isolate 20110869

Catalog No. NR-49292

Product Description: *Clostridium difficile* (*C. difficile*; also referred to as *Peptoclostridium difficile*), isolate 20110869 was obtained from the stool of a young adult male patient with a community-associated (CA) *C. difficile* infection in Tennessee, USA, in 2011. Isolate 20110869 was deposited as PCR ribotype 001_072, North American pulsed-field gel electrophoresis type 2 (NAP2), containing *tcdA*, *tcdB* and *tcdC* of the PaLoc operon. This isolate is reported to be negative for the *C. difficile* binary toxin (CDT).

[1]NR-49292 was produced by inoculation of the deposited material into Modified Reinforced Clostridial medium and incubated for 2 days at 37°C in an anaerobic atmosphere (< 0.5% O_2; Remel™ Anaero Pack-Anaero™ R681001). The material from the initial growth was passaged on Tryptic Soy agar with 5% defibrinated sheep blood kolles for 2 days at 37°C in an anaerobic atmosphere to produce this lot.

[3]Tests were assessed after 7 days at 37°C in an anaerobic atmosphere. The gelatin tube was placed at 4°C for one hour prior to result determination.
