## Staphylococcus aureus, Strain NY-155

## Catalog No. NR-46236

Product Description: Staphylococcus aureus (S. aureus), strain NY-155 was isolated in 2005 from the blood of a 12-day-old female with cellulitis and/or a bloodstream infection in New York, USA. S. aureus, strain NY-155 is a clinically-associated methicillin-resistant S. aureus (MRSA) strain.

Lot ${ }^{1}$ : 63693273
Manufacturing Date: 13AUG2015

| Genotypic Analysis <br> Sequencing of 16 S ribosomal RNA gene ( $\sim 1440$ base pairs) | $\geq 99 \%$ sequence identity to S.aureus type strain | 100\% sequence identity to L37597 |
| Purity (post-freeze) ${ }^{10}$ | Consistent with expected colony morphology | Consistent with expected colony morphology |
| Viability (post-freeze) ${ }^{\mathbf{2}}$ | Growth | Growth |

${ }^{1}$ S. aureus, strain NY-155 was deposited to BEI Resources as part of the NARSA collection. NR-46236 was produced by inoculation of the deposited material into Tryptic Soy broth and grown 1 day at $37^{\circ} \mathrm{C}$ in an aerobic atmosphere. Broth inoculum was added to Tryptic Soy agar with $5 \%$ defibrinated sheep blood kolles which were grown 1 day at $37^{\circ} \mathrm{C}$ in an aerobic atmosphere to produce this lot.
${ }^{2} 1$ day at $37^{\circ} \mathrm{C}$ in an aerobic atmosphere on Tryptic Soy agar with $5 \%$ defibrinated sheep blood
${ }^{3} 4$ hours at $37^{\circ} \mathrm{C}$ in rabbit serum with $0.15 \%$ EDTA (Coagulase Plasma BBL ${ }^{\text {M }} 240827$ )
${ }^{4}$ Percent probabilities above $90 \%$ indicate a close match to the typical biochemical pattern for the given organism, with a percent probability of $99 \%$ being a perfect match between the test reaction pattern and the unique biochemical pattern of the given organism or organism group. For additional information, please refer to O'Hara, C.M. and J. M. Miller. "Evaluation of the Vitek 2 ID-GNB Assay for Identification of Members of the Family Enterobacteriaceae and Other Nonenteric Gram-Negative Bacilli and Comparison with the Vitek GNI+ Card." J. Clin. Microbiol. 41 (2003): 2096-2101. PubMed: 12734254.
${ }^{5}$ Minimum Inhibitory Concentration (MIC); MIC Interpretation Guideline: CLSI M100-S22 (2012)
${ }^{6}$ The production of beta-lactamase was detected using a Cefinase ${ }^{\text {TM }}$ Paper Disc (BBL ${ }^{\text {TM }} 231650$ ).
${ }^{7}$ MIC Interpretation Guideline: EUCAST Version 4.0 (2014)
${ }^{8} 1$ day at $37^{\circ} \mathrm{C}$ in an aerobic atmosphere on Mueller Hinton agar
${ }^{9}$ For both chloramphenicol (bioMérieux Etest ${ }^{\circledR}$ 412308) and teicoplanin (bioMérieux Etest ${ }^{\circledR} 412459$ ), a MIC $\leq 8 \mu \mathrm{~g} / \mathrm{mL}$ is sensitive, a MIC $=16 \mu \mathrm{~g} / \mathrm{mL}$ is intermediate and a MIC $\geq 32 \mu \mathrm{~g} / \mathrm{mL}$ is resistant.
${ }^{10}$ Purity of this lot was assessed for 7 days at $37^{\circ} \mathrm{C}$ in an aerobic atmosphere on Tryptic Soy agar with $5 \%$ defibrinated sheep blood.
