¹10-to-11-day-old SPF Fertile Chicken Eggs acquired from B&E Eggs, York Springs, PA.

²Grown in embryonated chicken eggs¹ for 2 days at 35°C in a humidified chamber without CO₂.

³The Chicken Embryo Infectious Dose 50% (CEID₅₀) is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the inoculated embryonated chicken eggs, just as a Lethal Dose 50% (LD₅₀) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the CEID₅₀ provides a measure of the infectious titer (or infectivity) of a virus preparation.

⁴70 hours at 35°C in a humidified chamber without CO₂.
