Certificate of Analysis for NR-49301

Clostridium difficile, Isolate 20110818

Catalog No. NR-49301

Product Description: *Clostridium difficile* (*C. difficile*; also referred to as *Peptoclostridium difficile*), isolate 20110818 was obtained from the stool of an older female patient with a community-associated (CA) *C. difficile* infection in western USA in 2010. Isolate 20110818 was deposited as PCR ribotype 020, North American pulsed-field gel electrophoresis type 4 (NAP4), containing *tcdA* and *tcdB* of the PaLoc operon. This isolate is reported to be negative for the *C. difficile* binary toxin (CDT).

[1]NR-49301 was produced by inoculation of the deposited material into Modified Reinforced Clostridial medium and incubated for 2 days at 37°C in an anaerobic atmosphere (< 0.5% O_2; Remel™ Anaero Pack-Anaero™ R681001). The material from the initial growth was passaged in Modified Reinforced Clostridial medium for 1 day at 37°C in an anaerobic atmosphere to produce this lot.
[2]1 day at 37°C in an anaerobic atmosphere on Tryptic Soy agar with 5% defibrinated sheep blood
[3]Tests were assessed after 7 days at 37°C in an anaerobic atmosphere. The gelatin tube was placed at 4°C for one hour prior to result determination.
