

***Mycobacterium palustre*, Strain FI-05088****Catalog No. NR-49070**

**Product Description:** *Mycobacterium palustre* (*M. palustre*), strain FI-05088 was isolated from a cervical lymph node of a human subject.

**Lot<sup>1</sup>:** 64362432**Manufacturing Date:** 01AUG2016

TEST	SPECIFICATIONS	RESULTS
<b>Phenotypic Analysis<sup>2,3</sup></b>		
Cellular morphology	Rods	Rods
Colony morphology <sup>4</sup>	Report results	Circular, convex, entire, smooth and cream (Figure 1)
Growth rate	≥ 7 days	13 days
Growth at 45°C	Positive	Positive
Growth at 55°C	Report results	Negative
Acid-fast stain	Positive (red colonies)	Positive (red colonies)
Pigmentation in the dark (Scotochromogen)	Positive	Negative (no pigment) <sup>5</sup>
Photoinduction for 1 hour (Photochromogen)	Negative (no pigment)	Negative (no pigment)
Nonchromogen (no pigment)	Negative	Positive <sup>5</sup>
Biochemical tests		
Catalase	Report results	Negative
Catalase (semiquantitative)	Negative	Negative
Catalase (68°C)	Report results	Negative
Iron uptake	Report results	Negative
Nitrate reduction	Report results	Negative
Tween 80 hydrolysis	Positive	Positive
Urease	Positive	Positive
Growth in the presence of 5% sodium chloride	Report results	Positive
Growth in the presence of thiophene-2-carboxylic acid hydrazide (TCH)	Report results	Positive
Growth on MacConkey agar without crystal violet	Report results	Negative
<b>Genotypic Analysis</b>		
Sequencing of 16S ribosomal RNA gene (~ 1820 base pairs)	≥ 99% sequence identity to <i>M. palustre</i> type strain (GenBank: AJ308603.1)	100% sequence identity to <i>M. palustre</i> type strain (GenBank: AJ308603.1)
Digital DNA-DNA hybridization (dDDH) <sup>6</sup>	≥ 70% for species identification	Not determined <sup>7,8</sup> (Table 1)
<b>Purity (post-freeze)</b>		
Middlebrook 7H10 agar with OADC enrichment <sup>9</sup>	Growth consistent with expected colony morphology	Growth consistent with expected colony morphology
Tryptic Soy agar <sup>9</sup>	Report results	Growth consistent with expected colony morphology
<b>Viability (post-freeze)<sup>4</sup></b>	Growth	Growth

<sup>1</sup>NR-49070 was produced by inoculation of the deposited material into Middlebrook 7H9 broth with ADC enrichment and grown for 14 days at 37°C in an aerobic atmosphere with 5% CO<sub>2</sub>. Broth inoculum was added to Middlebrook 7H10 agar with OADC enrichment kolles, which were grown for 6 days at 37°C in an aerobic atmosphere with 5% CO<sub>2</sub> to produce this lot.

<sup>2</sup>Information on *Mycobacterium* testing is available from Ribón, W. "Biochemical Isolation and Identification of Mycobacteria." [Biochemical Testing](#). (2012) Jose C. Jimenez-Lopez (Ed.), InTech, <http://www.intechopen.com/books/biochemical-testing/biochemical-isolation-and-identification-of-mycobacteria> and Lévy-Frébault, V. V. and F. Portaels. "Proposed Minimal Standards for the Genus *Mycobacterium* and for Description of New Slowly Growing *Mycobacterium* Species." *Int. J. Syst. Bacteriol.* 42 (1992): 315-323. PubMed: 1581193.

<sup>3</sup>Phenotypic characterization of *M. palustre* was performed following: Torkko, P., et al. "*Mycobacterium palustre* sp. nov., a Potentially Pathogenic, Slowly Growing *Mycobacterium* Isolate from Clinical and Veterinary Specimens and from Finnish Stream Waters." *Int. J. Syst. Evol. Microbiol.* 52 (2002): 1519-1525. PubMed: 12361253.

<sup>4</sup>13 days at 37°C in an aerobic atmosphere with 5% CO<sub>2</sub> on Middlebrook 7H10 agar with OADC enrichment

<sup>5</sup>NR-49070 was deposited as *M. palustre* and reported to be positive for pigmentation in the dark (scotochromogen). Testing performed in triplicate by BEI Resources indicates NR-49070 tested positive as a nonchromogen.

# Certificate of Analysis for NR-49070

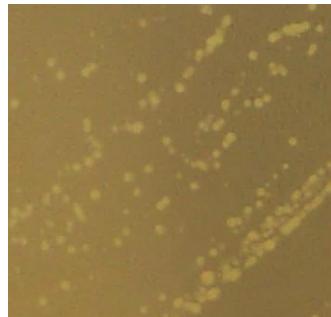

<sup>6</sup>Relatedness between bacterial strains has traditionally been determined using DDH. For additional information, refer to Auch, A.F., et al. "Digital DNA-DNA Hybridization for Microbial Species Delineation by Means of Genome-to-Genome Sequence Comparison." *Stand. Genomic Sci.* 2 (2010): 117-134. PubMed: 21304684.

<sup>7</sup>The whole genome of *M. palustre*, strain FI-05088 (Contig Total Length ~ 5.8 megabase pairs) was sequenced using the Illumina® MiSeq® system and was assembled and analyzed with CLC Genomics Workbench Version 7.0.2.

<sup>8</sup>The required whole genome sequence for the type strain of this species is not available. dDDH testing rules out all species listed in Table 1, however, this does not rule out species for which the type strains whole genome sequences are not available.

<sup>9</sup>Purity of this lot was assessed for 13 days at 37°C in an aerobic atmosphere with 5% CO<sub>2</sub>.
