

Influenza A Virus, A/chicken/Germany/N/49 (H10N7)

Catalog No. NR-2760

(Derived from ATCC® VR-1334™)

Product Description: Pooled allantoic fluid from specific-pathogen free (SPF) embryonated chicken eggs¹ infected with influenza A virus, A/chicken/Germany/N/49 (H10N7).

Lot²: 7677044

Manufacturing Date: 05OCT2006

TEST	SPECIFICATIONS	RESULTS
Identification by Infectivity Using Embryonated Chicken Eggs¹ Hemagglutination assay	Active	Active
Sequencing of Species-Specific Region	Influenza A virus	Influenza A virus
Titer by CEID₅₀ Assay^{3,4} in Embryonated Chicken Eggs¹	Report results	1.6 X 10 ⁷ CEID ₅₀ /mL
RT-PCR Assay of Extracted RNA⁵	~ 1030 bp amplicon	~ 1030 bp amplicon
Sterility (21-day incubation) Harpo's HTYE broth ⁶ , 37°C and 26°C, aerobic Trypticase soy broth, 37°C and 26°C, aerobic Sabouraud broth, 37°C and 26°C, aerobic Sheep blood agar, 37°C, aerobic Sheep blood agar, 37°C, anaerobic Thioglycollate broth, 37°C, anaerobic DMEM with 10% FBS, 37°C and 5% CO ₂	No growth No growth No growth No growth No growth No growth No growth	No growth No growth No growth No growth No growth No growth No growth
Mycoplasma Contamination Agar and broth culture (14-day incubation at 37°C) DNA detection by PCR of extracted Test Article nucleic acid	None detected None detected	None detected None detected

¹10-day-old SPF Fertile Chicken Eggs acquired from B&E Eggs, York Springs, PA.

²NR-2760 was produced by growth of ATCC® VR-1334™ (Lot 214343) in the allantoic cavity of embryonated chicken eggs¹ for 2 days at 35°C in a humidified chamber without CO₂.

³The Chicken Embryo Infectious Dose 50% (CEID₅₀) is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the inoculated embryonated chicken eggs, just as a Lethal Dose 50% (LD₅₀) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the CEID₅₀ provides a measure of the infectious titer (or infectivity) of a virus preparation.

⁴48 hours at 35°C in a humidified chamber without CO₂.
