SUPPORTING INFECTIOUS DISEASE RESEARCH

Mycobacterium tuberculosis, Strain 98-2535

Catalog No. NR-30869

This reagent is the tangible property of the U.S. Government.

Product Description: *Mycobacterium tuberculosis (M. tuberculosis)*, strain 98-2535 was isolated between 1995 and 2000 from human sputum from an HIV-negative patient infected with pulmonary tuberculosis in North America.

Lot¹: 70002590

Manufacturing Date: 26MAY2017

SPECIFICATIONS	RESULTS
Gram-positive rods	Gram-positive rods
Report results	Irregular, slight peaked, undulate, rough and cream (Figure 1)
≥ 7 days	21 days
Negative	Negative
Positive	Positive
Positive (red colonies)	Positive (red colonies)
	Negative (no pigment)
	Negative (no pigment)
Positive (no pigment)	Positive (no pigment)
Positive	Positive
Positive	Positive
Positive	Positive
Report results	0.5 μg/mL ^{7,8}
	16 μg/mL
	$1 \mu\text{g/mL}^9$
	$1.2 \mu g/mL^9$
	≤ 0.03 µg/mL
	$2.5 \mu g/m L^{8,10}$
	0.25 μg/mL
	0.5 µg/mL
	≤ 0.5 µg/mL ⁹
	$\leq 0.12 \mu g/mL^9$
	$\leq 0.12 \mu g/mL$
Report results	$2 \mu g/m L^{8,9,11}$
≥ 99% sequence identity to <i>M. tuberculosis</i> type strain (GenBank: AL123456)	100% sequence identity to <i>M. tuberculosis</i> type strain (GenBank: AL123456) ¹²
Growth consistent with expected colony morphology Report results	Growth consistent with expected colony morphology Growth consistent with expected

_	 ≥ 7 days Negative Positive Positive (red colonies) Negative (no pigment) Negative (no pigment) Positive (no pigment) Positive Positive Positive Positive Positive Report results Report results Report results Growth consistent with expected colony morphology

¹NR-30869 was produced by inoculation of the deposited material into Middlebrook 7H9 broth with ADC enrichment. Broth inoculum was added to Middlebrook 7H10 agar with OADC enrichment kolles, which were grown for 49 days at 37°C in an aerobic atmosphere with 5% CO₂ to produce this lot.

SUPPORTING INFECTIOUS DISEASE RESEARCH

²Information on Mycobacterium testing is available from Ribón, W. "Biochemical Isolation and Identification of Mycobacteria." <u>Biochemical Testing</u>. (2012) Jose C. Jimenez-Lopez (Ed.), InTech, <u>http://www.intechopen.com/books/biochemical-testing/biochemical-isolation-and-identification-of-mycobacteria</u> and Lévy-Frébault, V. V. and F. Portaels. "Proposed Minimal Standards for the Genus *Mycobacterium* and for Description of New Slowly Growing *Mycobacterium* Species." Int. J. Syst. Bacteriol. 42 (1992): 315-323. PubMed: 1581193.

³21 days at 37°C in an aerobic atmosphere with 5% CO₂ on Middlebrook 7H10 agar with OADC enrichment

⁴All mycobacteria produce niacin but only *M. tuberculosis* accumulates it, resulting in a positive test for *M. tuberculosis*.

⁵Sensititre™ System *Mycobacterium tuberculosis* MIC Plate, Thermo Scientific™, catalog number MYCOTB

- ⁶Minimum Inhibitory Concentration (MIC); No Clinical & Laboratory Standards Institute (CLSI) interpretations of the Sensititre[™] System data for *M. tuberculosis* are currently available.
- ⁷Two MICs were observed for amikacin (0.25 μg/mL and 0.5 μg/mL) under identical test conditions. The highest MIC is being reported as the test result.
- ⁸Variability in the MIC result by the Sensititre™ method has been demonstrated (Lee, J., et al. "Sensititre MYCOTB MIC Plate for Testing *Mycobacterium tuberculosis* Susceptibility to First- and Second-Line Drugs." <u>Antimicrob. Agents Chemother.</u> 58 (2014): 11-18. PubMed: 24100497), with the results for a single antibiotic typically within one doubling dilution.
- ⁹For streptomycin, ethionamide, para-aminosalicylic acid, rifabutin and ethambutol, the endpoint for these drugs is determined by the well with approximately 80% inhibition of growth compared to the positive control well with no drug.
- ¹⁰Two MICs were observed for kanamycin (1.2 µg/mL and 2.5 µg/mL) under identical test conditions. The highest MIC is being reported as the test result.
- ¹¹Two MICs were observed for streptomycin (1 µg/mL and 2 µg/mL) under identical test conditions. The highest MIC is being reported as the test result.

¹²Also consistent with *M. africanum, M. bovis, M. canettii, M. caprae* and *M. microti*

- ¹³Purity of this lot was assessed for 52 days at 37°C in an aerobic atmosphere with 5% CO₂.
- ¹⁴Purity of this lot was assessed for 21 days at 37°C in an aerobic atmosphere with 5% CO₂.
