

Certificate of Analysis for NR-30899

Mycobacterium tuberculosis, Strain 98-3124

Catalog No. NR-30899

This reagent is the tangible property of the U.S. Government.

Product Description: *Mycobacterium tuberculosis (M. tuberculosis)*, strain 98-3124 was isolated between 1995 and 2000 from human sputum from an HIV-negative patient infected with pulmonary tuberculosis in North America.

Lot¹: 70004560 Manufacturing Date: 01JUN2017

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis ²		
Cellular morphology	Gram-positive rods	Gram-positive rods
Colony morphology ³	Report results	Irregular, slight peaked, undulate,
, , ,	·	rough and cream (Figure 1)
Growth rate	≥ 7 days	21 days
Growth at 26°C	Negative	Negative
Growth at 37°C	Positive	Positive
Acid-fast stain	Positive (red colonies)	Positive (red colonies)
Pigmentation in the dark (Scotochromogen)	Negative (no pigment)	Negative (no pigment)
Photoinduction for 1 hour (Photochromogen)	Negative (no pigment)	Negative (no pigment)
Nonchromogen (no pigment)	Positive (no pigment)	Positive (no pigment)
Biochemical tests	, , , , ,	
Niacin production ⁴	Positive	Positive
Nitrate reduction	Positive	Positive
Antibiotic Susceptibility Profile		
Sensititre TM System ^{5,6}		
Amikacin	Report results	0.5 μg/mL ^{7,8}
Cycloserine	Report results	16 μg/mL ^{8,9}
Ethambutol	Report results	1 µg/mL ¹⁰
Ethionamide	Report results	1.2 µg/mL ^{8,10,11}
Isoniazid	Report results	0.06 μg/mL
Kanamycin	Report results	1.2 µg/mL
Moxifloxacin	Report results	0.25 μg/mL ^{8,12}
Ofloxacin	Report results	0.5 µg/mL
Para-aminosalicylic acid	Report results	≤ 0.5 µg/mL ¹⁰
Rifabutin	Report results	≤ 0.12 µg/mL ¹⁰
Rifampin	Report results	0.25 μg/mL ^{8,13}
Streptomycin	Report results	0.5 µg/mL ¹⁰
	-1	1 3
Genotypic Analysis	> 000/	1000/
Sequencing of Heat Shock Protein 65 gene	≥ 99% sequence identity to	100% sequence identity to
(~ 430 base pairs)	M. tuberculosis type strain	M. tuberculosis type strain
	(GenBank: AL123456)	(GenBank: AL123456) ¹⁴
Purity (post-freeze)		
Middlebrook 7H10 agar with OADC enrichment ¹⁵	Growth consistent with expected	Growth consistent with expected
<u> </u>	colony morphology	colony morphology
Tryptic Soy agar ¹⁶	Report results	Growth consistent with expected
		colony morphology
Viability (post-freeze) ³	Growth	Growth
riability (post-lieeze)	Ciowaii	Clowdi

¹NR-30899 was produced by inoculation of the deposited material into Middlebrook 7H9 broth with ADC enrichment. Broth inoculum was added to Middlebrook 7H10 agar with OADC enrichment kolles, which were grown for 21 days at 37°C in an aerobic atmosphere with 5% CO₂ to produce this lot.

²Information on Mycobacterium testing is available from Ribón, W. "Biochemical Isolation and Identification of Mycobacteria." <u>Biochemical Testing.</u> (2012) Jose C. Jimenez-Lopez (Ed.), InTech, <a href="http://www.intechopen.com/books/biochemical-testing/biochemical-isolation-and-identification-of-testing-te

Certificate of Analysis for NR-30899

mycobacteria and Lévy-Frébault, V. V. and F. Portaels. "Proposed Minimal Standards for the Genus Mycobacterium and for Description of New Slowly Growing Mycobacterium Species." Int. J. Syst. Bacteriol. 42 (1992): 315-323. PubMed: 1581193.

³21 days at 37°C in an aerobic atmosphere with 5% CO₂ on Middlebrook 7H10 agar with OADC enrichment

⁴All mycobacteria produce niacin but only *M. tuberculosis* accumulates it, resulting in a positive test for *M. tuberculosis*.

⁵Sensititre[™] System *Mycobacterium tuberculosis* MIC Plate, Thermo Scientific[™], catalog number MYCOTB

- ⁶Minimum Inhibitory Concentration (MIC); No Clinical & Laboratory Standards Institute (CLSI) interpretations of the Sensititre™ System data for M. tuberculosis are currently available.
- ⁷Two MICs were observed for amikacin (0.25 μg/mL and 0.5 μg/mL) under identical test conditions. The highest MIC is being reported as the test result.
- ⁸Variability in the MIC result by the Sensititre method has been demonstrated (Lee, J., et al. "Sensititre MYCOTB MIC Plate for Testing Mycobacterium tuberculosis Susceptibility to First- and Second-Line Drugs." Antimicrob. Agents Chemother. 58 (2014): 11-18. PubMed: 24100497), with the results for a single antibiotic typically within one doubling dilution.
- ⁹Two MICs were observed for cycloserine (8 μg/mL and 16 μg/mL) under identical test conditions. The highest MIC is being reported as the test result. ¹⁰For streptomycin, ethionamide, para-aminosalicylic acid, rifabutin and ethambutol, the endpoint for these drugs is determined by the well with approximately 80% inhibition of growth compared to the positive control well with no drug.
- 11Two MICs were observed for ethionamide (0.6 µg/mL and 1.2 µg/mL) under identical test conditions. The highest MIC is being reported as the test
- ¹²Two MICs were observed for moxifloxacin (0.12 μg/mL and 0.25 μg/mL) under identical test conditions. The highest MIC is being reported as the test result.
- ¹³Two MICs were observed for rifampin (≤ 0.12 μg/mL and 0.25 μg/mL) under identical test conditions. The highest MIC is being reported as the test result.
- ¹⁴Also consistent with M. africanum, M. bovis, M. canettii, M. caprae and M. microti
- ¹⁵Purity of this lot was assessed for 64 days at 37°C in an aerobic atmosphere with 5% CO₂.
- ¹⁶Purity of this lot was assessed for 21 days at 37°C in an aerobic atmosphere with 5% CO₂.
