

Pseudomonas aeruginosa, Strain MRSN 19711

Catalog No. NR-51594

This reagent is the tangible property of the U.S. Government.

Product Description:

Pseudomonas aeruginosa (*P. aeruginosa*), strain MRSN 19711 was isolated in 2013 from a human respiratory sample as part of a surveillance program in the United States. NR-51594 was deposited as sensitive to amikacin, ciprofloxacin, gentamicin and tobramycin and resistant to aztreonam, imipenem and meropenem with intermediate resistance to cefepime, ceftazidime, levofloxacin and piperacillin/tazobactam.

¹NR-51594 was produced by inoculation of the depositor material into Tryptic Soy broth and grown for 1 day at 37°C in an aerobic atmosphere. Broth inoculum was added to Tryptic Soy agar kolles, which were grown for 1 day at 37°C in an aerobic atmosphere to produce this lot.

⁴*P. aeruginosa* strain MRSN 19711 was deposited as intermediately resistant to piperacillin/tazobactam. Repeated antibiotic susceptibility testing determined that strain MRSN 19711 is resistant to piperacillin/tazobactam.

⁵The susceptibility result for this antibiotic is within one doubling dilution of specification, which is considered an equivalent result.

⁶Trimethoprim/sulfamethoxazole MIC interpretive standards are not available for *P. aeruginosa*, however most clinical isolates are resistant to trimethoprim/sulfamethoxazole. For more information, please refer to Köhler, T., et al. "Multidrug Efflux in Intrinsic Resistance to Trimethoprim and Sulfamethoxazole in *Pseudomonas aeruginosa*." *Antimicrob. Agents Chemother.* 40 (1996): 2288-2290. PubMed: 9036831.

⁷Purity of this lot was assessed for 7 days at 37°C in an aerobic atmosphere with and without 5% CO₂ on Tryptic Soy agar.
