Catalog No. NR-51614

This reagent is the tangible property of the U.S. Government.

Product Description:

Pseudomonas aeruginosa (P. aeruginosa), strain MRSN 443463 was isolated in 2017 from human sputum as part of a surveillance program in the United States. *P. aeruginosa*, strain MRSN 443463 was deposited as sensitive to amikacin, ceftazidime, imipenem, cefepime, piperacillin/tazobactam, meropenem, gentamicin, tobramycin, levofloxacin, ciprofloxacin and aztreonam.

[1]NR-51614 was produced by inoculation of the depositor material into Tryptic Soy broth and grown for 1 day at 37°C in an aerobic atmosphere. Broth inoculum was added to Tryptic Soy agar kolles, which were grown for 1 day at 37°C in an aerobic atmosphere to produce this lot.

[4]*P. aeruginosa*, strain MRSN 443463 was deposited as sensitive to gentamicin. Antibiotic susceptibility testing performed in duplicate determined that strain MRSN 443463 is intermediately resistant to gentamicin.
[5]Trimethoprim/sulfamethoxazole MIC interpretive standards are not available for *P. aeruginosa*, however most clinical isolates are resistant to trimethoprim/sulfamethoxazole. [6]Purity of this lot was assessed for 7 days at 37°C in an aerobic atmosphere with and without 5% CO_2 on Tryptic Soy agar.
