

***Pseudomonas aeruginosa*, Strain MRSN 25762**

Catalog No. NR-51600

This reagent is the tangible property of the U.S. Government.

Product Description:

Pseudomonas aeruginosa (*P. aeruginosa*), strain MRSN 25762 is a human respiratory isolate collected in 2014 as part of a surveillance program in the United States. *P. aeruginosa*, strain MRSN 25762 was deposited as sensitive to amikacin, aztreonam, ceftazidime, ciprofloxacin, gentamicin, levofloxacin, tobramycin and piperacillin/tazobactam and resistant to imipenem and meropenem, with intermediate resistance to cefepime.

¹NR-51600 was produced by inoculation of the depositor material into Tryptic Soy broth and grown for 1 day at 37°C in an aerobic atmosphere. Broth inoculum was added to Tryptic Soy agar kolles, which were grown for 1 day at 37°C in an aerobic atmosphere to produce this lot.

³Minimum Inhibitory Concentration (MIC); MIC Interpretation Guideline: CLSI M100-S28 (2018)

⁴*P. aeruginosa*, strain MRSN 25762 was deposited as sensitive to amikacin, but showed a MIC of 32 µg/mL (interpreted as intermediate) for amikacin during QC testing. Testing was performed in duplicate.

⁵Susceptibility results for this antibiotic is within one doubling dilution of specification, which is considered an equivalent result.

⁶Trimethoprim/sulfamethoxazole MIC interpretive standards are not available for *P. aeruginosa*, however, most clinical isolates are resistant to trimethoprim/sulfamethoxazole. For more information, please refer to Köhler, T., et al. "Multidrug Efflux in Intrinsic Resistance to Trimethoprim and Sulfamethoxazole in *Pseudomonas aeruginosa*." *Antimicrob. Agents Chemother.* 40 (1996): 2288-2290. PubMed: 9036831.

⁷Purity of this lot was assessed for 7 days at 37°C in an aerobic atmosphere with and without 5% CO₂ on Tryptic Soy agar.
